Risk & Compliance
Email Information Security

Stop Emails From Being Sent To The Wrong Recipients.
Protect Sensitive Data—even after you click Send.

SendGuard is used by **Fortune 500 companies, multi-national law and financial firms**, and companies in other sectors working with confidential information to manage email risk and compliance.

WHAT WE OFFER

Businesses need to comply with **national, international, data-privacy** and, where applicable, **industry-specific regulations**.

These laws include GDPR, CCPA, HIPAA, FINRA, POPIA, PEPIDA.

Unfortunately, it is too easy to accidentally send emails to the wrong people in Microsoft Outlook.

Outlook “features” like Auto-Complete and Reply-All make these mistakes too easy.

SendGuard works inside Microsoft Outlook (Desktop, M365 OWA, MAC & Outlook for Mobile) gets users to confirm recipients and attachments before emails are sent out.

It can also detect and warn or block potentially sensitive, confidential or non-compliant emails.

SendGuard can also be configured to carry out additional checks important to your business.

Why SendGuard?

Confirm Recipients and Attachments before Sending Emails

Get Users to confirm both attachments and recipients before emails are sent. Setup filters to control if the prompt is displayed for all emails or external emails only. External emails are color-coded for immediate identification.

Detect, Confirm or Block Sensitive/Inappropriate Content

Set DLP Rules to detect sensitive (Social Security Numbers, Credit Cards etc.) or inappropriate information (profanities etc.). Configure DLP to either get confirmation or block sending.

Define Your Own Checks/Actions on Outgoing Emails

Use the SendRules engine to define your own Checks and Actions on outgoing emails. Quickly define IF/THEN conditions with an easy-to-configure interface.

Unsend Emails even after clicking Send

Automatically delay (non-urgent) emails for a minute to allow "recall" of sent emails.

Keep Logs for Additional Protection and Audit Trail

SendGuard can also be configured to keep a log of any emails that users choose to send after a prompt is displayed.

Centralized Deployment, Configuration and Management

Configure and manage settings using Intune, Microsoft 365 Admin Center, GPO or your preferred tool. Administrators can use the SendGuard license management system to centrally manage settings and users, with settings automatically pushed to users.

Supported on Outlook Classic, New Outlook, Windows, Mac, Microsoft 365 OWA & Outlook for Mobile

SendGuard works on Outlook Desktop and Microsoft 365 (Outlook for Windows, OWA, MAC and supports Outlook on Mobile. It is also fully supported on the New Outlook.

Please contact us at: sales@standss.com

Include your phone number (if possible) and our team will contact you to give you more information, arrange a demo and/or setup a trial.

You can also find additional information at our website.
